

# EV2

## AIR ARMS Engineering

Following on from our popular field target rifle the Pro Target, this new generation rifle will extend the boundaries of field target shooting.

Out of the box this rifle is fully equipped with features that are normally considered optional extras, allowing the shooter to commence shooting at a competitive level without delay.

The Ev2 has a rotary swaged barrel not known to be on any other air rifle, whilst most barrels are accurate, the use of rotary swaging allows tight manufacturing limits to be used and so improves the final quality of the barrel.

18 months from drawing board to manufacture and a further 12 months of shooting trials have ensured the EV2s performance. This time and effort have produced a shooting instrument rather than just a rifle.

All of this makes the Ev2 the best all round state of the art field target rifle on the market.

Specification	EV2
Barrel Length	420mm (16.15")
Rifling	Rotary swaged
Weight	4.14kg (9.12lbs)
Filling Pressure	200 bar (2900psi)
Muzzle Energy	16 joules (12ftlb)
